1 UI UX

1.1 Stage I: Research

Survey Analysis A 15-question online survey was distributed to Egyptian residents, collecting responses from **45 participants** across four sections: Demographics, Experience with Legal Services, Trust & Platform Interest, and Features & Preferences.

Section A: Demographics

Q1 — Age	Q2 — Gender	Q3 — Occupation	%
18–24: 30 (66.7%)	Female: 25 (55.6%)	Student: 35 (77.8%)	—
25–34: 12 (26.7%)	Male: 20 (44.4%)	Private Sector: 3 (6.7%)	—
35–44: 2 (4.4%)	—	Lawyer/Legal: 3 (6.7%)	—
45–54: 1 (2.2%)	—	Other: 4 (8.9%)	—

Key insight: Two-thirds of respondents are digitally native young adults (18–24); students form the core persona (77.8%). The sample is gender-balanced (55.6% female).

Section B: Experience with Legal Services

Q4 — Ever needed legal services? 64.5% of non-professionals either have needed or anticipate needing legal services, confirming latent demand.

Q5 — How did you find your lawyer? 82.2% either never found a lawyer or relied on informal personal networks; only 8.9% used online search and 2.2% used the Bar Association — confirming the absence of a structured digital discovery channel.

Q6 — Difficulty finding a trustworthy lawyer (1–5): Average **3.53/5**; 80% rated 3 or higher — the primary friction point.

Q7 — Price transparency before booking (1–5): Average **2.36/5** (lowest metric). 60% rated 1 or 2. Upfront pricing is a critical requirement.

Q8 — Biggest challenges (open-ended):

1. Cannot verify lawyer qualifications ($\approx 28\%$)
2. No way to compare lawyers ($\approx 20\%$)
3. No pricing transparency ($\approx 18\%$)
4. Difficulty booking/scheduling ($\approx 13\%$)
5. Legal jargon incomprehensible ($\approx 11\%$)
6. Services too expensive for students ($\approx 9\%$)

Section C: Trust & Platform Interest

Q9 — Credential verification importance (1–5): Average **4.16/5** — the highest-rated metric. 80% rated 4 or 5.

Q10 — Trust reviews and ratings? 95.6% are open to using reviews; 31.1% require combining reviews with credential verification, reinforcing the need for a multi-signal trust system.

Q11 — Likelihood to use an online legal platform (1–5): Average **3.89/5**; 71.1% rated 4 or 5 — strong adoption intent.

Section D: Features & Preferences

Q12 — Most valuable features (select up to 3):

Feature	Votes	% of Respondents
Transparent pricing before booking	21	46.7%
Legal articles & educational resources	20	44.4%
Verified lawyer profiles with credentials	20	44.4%
Search & filter by specialisation/location	17	37.8%
Emergency legal chatbot (Arabic)	16	35.6%
Client reviews and star ratings	16	35.6%
Online appointment booking	13	28.9%
AI contract/document review	12	26.7%

All eight features scored above 25%, confirming broad value across the full feature set.

Q13 — AI contract review: 62.2% would use it (definitively or as a supplement); only 13.3% reject it.

Q14 — Preferred payment: Mobile wallet (40%), online card (22.2%), cash on session (17.8%). Multiple payment methods are required.

Overall Survey Summary:

Key Metric	Score	Interpretation
Difficulty finding lawyer (Q6)	3.53/5	Moderately–very difficult
Price transparency (Q7)	2.36/5	Critically low
Verification importance (Q9)	4.16/5	Extremely important
Platform adoption intent (Q11)	3.89/5	High intent
AI review acceptance (Q13)	62.2%	Strongly validated

Gains identified: Verified lawyer directory; transparent upfront pricing; online booking; AI contract review in Arabic; emergency legal chatbot; verified review system; legal education content.

Pain points identified: No centralised digital discovery channel; hidden/inconsistent pricing; inability to compare lawyers; over-reliance on informal networks; legal jargon barriers; fake credentials on social media; geographic inequality outside Cairo; financial barriers for students.

Empathy Map and Personas Empathy Map — Egyptian Resident Seeking Legal Services

SAYS	“I don’t know where to start.” / “How do I verify this lawyer is qualified?” / “I wish I could see prices upfront.” / “Online reviews seem fake.” / “Legal documents are too complicated.”
THINKS	“Am I getting scammed?” / “Why can’t I compare lawyers like I compare everything else?” / “Am I overpaying?” / “Lawyers won’t take a student seriously.”
FEELS	Anxious about legal problems; Frustrated by opaque pricing; Overwhelmed by jargon; Distrustful of unverified profiles; Hopeful that a structured platform could help.
DOES	Asks family/friends for referrals; searches Facebook groups; delays action; pays cash with no prior fee agreement; signs contracts without understanding them.
SEES	Booking platforms in healthcare (Vezeeta) and food (Talabat), but not law; unverifiable social media lawyer pages.
HEARS	“Use word of mouth, not the internet.” / “Legal services are expensive no matter what.” / “You need connections.”

Persona 1: Ahmed Hassan — 21, CS student, Nasr City. Needed a lawyer to review a rental contract; found one via Facebook who was overpriced and unhelpful. Digitally native, expects every service to be searchable and bookable. Goals: find a verified specialist, know fees upfront, book easily, get contracts reviewed. Frustrated by wasted time, overcharging, and inability to verify credentials.

Quote: “I just want to find a good lawyer the same way I find a good doctor — search, compare, read reviews, and book.”

Persona 2: Dr. Noha El-Sayed — 36, independent lawyer (Family & Civil Law), Dokki. 12 years of experience; recently left a large firm. Struggles to attract clients without an established network; Instagram page generates unserious leads. Goals: professional online presence, qualified client leads, efficient schedule management, verified reviews, thought-leadership publishing. Frustrated by time spent on social media marketing instead of practising law.

Quote: “In Egypt clients find lawyers through connections, not competence. A platform that verifies my credentials would change everything.”

1.2 Stage II: Define a Problem

Pain Points (Categorised) **1. Discovery & Access:** No centralised digital channel; dependence on word-of-mouth; near-zero options outside Cairo; difficulty identifying the

right specialisation.

2. Trust & Verification: No way to verify credentials; unqualified individuals advertising as lawyers; unmoderated fake reviews.

3. Transparency & Pricing: No upfront pricing; wildly inconsistent fee quotes; financial anxiety among students.

4. Usability & Accessibility: No online booking; incomprehensible legal jargon; no emergency resource; lack of Arabic-language digital legal tools.

5Ws and H

Who	Egyptian residents (primarily students, 18–34) and lawyers seeking clients beyond their personal network.
What	Absence of a centralised, trusted digital marketplace for finding, comparing, and booking verified lawyers.
Where	Urban Egypt (Cairo, Giza, Alexandria); more acute in smaller governorates.
When	Whenever a legal need arises — signing a contract, facing a dispute, urgent advice required.
Why	The legal sector has had minimal digital transformation; no dominant verified marketplace exists; both clients and lawyers depend on informal referral networks.
How	Currently via word-of-mouth, unverifiable social media, or the rarely-used Bar Association directory — all slow and unreliable.

Problem Statements [This Sentence Was Left Intentionally by Usama to Push PS1 Into a New Line]

PS1 — Discovery & Trust: Ahmed needs a way to find and verify a specialist lawyer because there is no centralised trusted digital platform in Egypt — forcing reliance on informal networks that expose him to unqualified individuals.

PS2 — Pricing Transparency: Egyptian clients need upfront cost information before booking because the current market operates with hidden, inconsistent pricing that creates financial anxiety, especially among students.

PS3 — Legal Comprehension & Urgency: Egyptian users facing legal documents or urgent situations need immediate, understandable Arabic-language guidance because no accessible, Arabic-native digital legal resource exists in Egypt.

1.3 Stage III: Ideate a Solution

Goal Statements [This Sentence Was Left Intentionally by Usama to Push GS1 Into a New Line]

GS1 — Discovery: Wakili will let users search and filter verified lawyers by specialisation, location, price, and rating — measured by time-to-first-booking and user-reported trust scores.

GS2 — Booking: Wakili will let users view transparent fees and book confirmed appointments online — measured by pre-booking price visibility rate and booking completion rate.

GS3 — AI Assistance: Wakili will let users upload contracts for AI review and access an Arabic emergency chatbot — measured by adoption rate and chatbot query resolution satisfaction.

Selected Solution and Rationale Eight features were ideated: (1) Verified Lawyer Directory, (2) Online Booking System, (3) AI Contract Analysis, (4) Arabic Emergency Chatbot, (5) Verified Review System, (6) Legal Education Hub, (7) Second-Opinion Feature, and (8) Lawyer Dashboard.

Selected solution: A comprehensive two-sided digital legal marketplace (Wakili) combining all eight features in a mobile-first, Arabic-first application. No single feature in isolation addresses the multi-dimensional problem; the two-sided model creates sustainable network effects between clients and lawyers.

Comparison with Existing Approaches

Approach	Weaknesses	Wakili Advantage
Word-of-mouth	No scalability; subjective quality; no pricing; network-limited.	Verified directory, nationwide, with objective ratings and upfront pricing.
Google/Social Media	Unverified individuals; fake reviews; no booking or pricing.	Admin-reviewed verification; moderated reviews; integrated booking and pricing.
Bar Association Directory	No booking; minimal profiles; not mobile-friendly; not searchable.	Full mobile app with rich profiles, smart search, scheduling, and payment.
International Platforms (Avvo, Legal-Zoom)	English-only; US/UK law; no local payments; not localised.	Arabic-first; Egyptian Bar verification; local payments (Vodafone Cash, Fawry, Instapay); Egyptian-law chatbot.

Feature Specification (Summary)

1. **Verified Lawyer Directory:** Filterable by specialisation, location, fee range, rating, and availability. Profiles include photo, credentials, experience, languages, hourly rate, and a verification badge.

2. **Three-Tier Verification:** National ID → Bar Association membership check → manual admin review. Verified badge displayed on profile.
3. **Transparent Pricing:** Consultation fees are mandatory fields, publicly displayed on every profile.
4. **Online Booking:** Real-time calendar booking with push and SMS confirmation; supports cancellation and rescheduling.
5. **Flexible Payment:** Cash-on-session, mobile wallet (Vodafone Cash, Fawry), credit/debit card, and bank transfer.
6. **AI Contract Review:** Upload PDF/image → plain-language summary, key clause identification, risk flags, and Q&A interface. Bilingual output (Arabic/English).
7. **Arabic Emergency Chatbot:** Grounded in Egyptian Constitution and Penal Code; natural Arabic-language input; instant guidance for urgent situations; SOS button to connect with an available lawyer.
8. **Legal Education Hub:** Plain-Arabic articles on legal rights, contract types, and procedures.
9. **Verified Review System:** Completed-booking gate prevents fake reviews; lawyers may respond publicly; moderators review flagged content.
10. **Lawyer Dashboard:** Profile management, availability calendar, booking management, analytics, and article publishing.

1.4 Stage IV: Wireframe, Site Map, and UI Design

Wireframes at <https://www.figma.com/design/L6M7qovjzCskTXpq9r5vGy/Wakili?node-id=0-1t=F7srxj0rNexkPia2-1Wireframes>.

2 Frontend

2.1 Design System

2.1.1 Colors

Our application utilizes a professional legal color palette defined in CSS variables, enforcing a clear visual hierarchy and branding:

- **Primary (Professional Blue):** `hsl(218, 85%, 25%) / #0A3176`
Used for primary interactions, main branding, and highlights.
- **Secondary (Elegant Gold):** `hsl(45, 85%, 55%) / #EEBD2B`
Used for secondary actions, active accents, and interactive elements.

- **Destructive/Warning:** `hsl(0, 84.2%, 60.2%) / #EF4444`
Used for error states, destructive actions (like deleting profiles), and alerts.
- **Success Green:** `hsl(142, 76%, 36%) / #16A34A`
Used for successful operations, confirmations, and positive trends.
- **Foreground (Dark Text/Body):** `hsl(220, 15%, 15%) / #20242B`
Used for general typography, strong text hierarchy, and structural elements.
- **Background (White):** `hsl(0, 0%, 100%) / #FFFFFF`
Used for main app backgrounds and elevated form cards.

Figure 1: Application Color Palette

2.1.2 Typography

The typography roles are defined to maintain an organized reading experience across the app (relying on **Cairo** and **sans-serif** fonts, mapped dynamically via Tailwind):

- **Title (32-48px):** Used for the application name, splash screens, and large display headings.
- **Header (Bold, 20-24px):** Used for screen titles, section headers, and card titles.
- **Regular (Normal, 14-16px):** Used for body text, descriptions, and form labels.
- **Bold (SemiBold/Bold, 14-16px):** Used for button labels, statistics, and highlighted values.

Figure 2: Typography Visualization

2.2 Custom UI Components

2.2.1 Custom Buttons

Component Name	Style	Where Used	Component Design
Primary Button	Solid Primary Blue (#0A3176), rounded corners, white text	Modals, form sub-missions, onboarding	Elevated CTA button with bold typography and hover animation
Secondary Button	Outline style or Solid Gold (#EEBD2B)	Cancel actions, secondary filters	Minimal emphasis button for supporting interactions
Action Button	Solid Destructive Red (#EF4444)	Deleting profiles, warnings	High-visibility destructive action button with confirmation states

Table 1: Custom Buttons Overview

Figure 3: Custom Buttons

2.2.2 Other Custom Components

Component Name	Style	Where Used
Article Card	Elevated white container with shadow, top image	Articles Page, Home Layout
Auth Modal	Centered dialog with back-drop blur, rounded corners	Main Navbar, Login/Registration
Chatbot Bubble	Tailored message bubbles (Primary/Neutral backgrounds)	AI Contract Review, AI Chat

Table 2: Custom Components Overview
